

In this edition:

RTM X2

RTM X2

FMS expands their product line of Wireless Tension Control Solutions with new RTM X2 System. This innovative system has been developed to provide for the efficient and accurate measurement, processing, transmission, and evaluation of material tension values on rotating Wire Processing Machinery. The expandable features of the RTM X2 System makes it ideal for applications in bunchers, twisters, and stranders.

Since the introduction of the original PC-Based RTM System years ago, FMS has successfully provided many Wireless Tension Control Solutions for a wide range of Wire Processing Applications, and continues to be a technology leader with the release of the RTM X2 System.

The RTM X2 System can be utilized in either a standalone configuration or integrated with an existing PLC, and thus is suitable for use by OEMs on New Machinery or by Integrators / End Users when upgrading Existing Machinery.

We look forward to discussing your application requirements during your visit to Wire 2010. Please visit us in Hall 11, Booth G20.
