

In this edition:

RTM X2

Dear Customer,

welcome to our latest FMS product information.

Our second generation radio telemetry system will open up this ground breaking technology to almost every user or builder of rotating machines where tension is a critical parameter.

With careful development and our experience of these operating systems in the field, FMS have once again brought class leading technology to the market in an affordable package.

### **RTM X2**

For the Wire2010 we will be exhibiting, amongst many other solutions, this system which will allow producers to easily manufacture a product which is of higher quality and consistency. Machine builders will also be able to supply products which will make both themselves and their customers more profitable. This design initially is for applications in bunchers, twisters and stranders where its single or two channel cost effective design will be particularly effective.

Visit us at the Wire2010 ([www.wire.de](http://www.wire.de)) from 12-16 April 2010 hall 11 booth G20, to learn more about how FMS systems can benefit your process.
