

In this edition:

The RTM X2 System Is Now Certified World Wide

Dear Customer,

The next top event of the cable industry is right around the corner. In a few days the professional world will meet at the CabWire World Conference in Düsseldorf to lively exchange news, trends, and prospects. At this event we display new capabilities that will improve your production processes with regards to quality, connectivity, and cost of ownership.

### **The RTM X2 System Is Now Certified World Wide**

RTM X2 is an innovative system that utilizes force measurement rollers to capture the tension value of individual wires or strands, and then securely transmits this data from the rotating to the static portion of the machine. This all happens over a radio link and without troublesome slip rings.

On the receiver side, measured tension values can be output as a standard signal to an existing PLC for monitoring or controlling the relevant production and quality parameters.

The system is in operation world wide and has been certified for the following important markets:

- ETSI Certification EU and EFTA
- FCC Certification USA
- RSS Certification Canada
- CAB Certification Japan

RTM X2 provides high quality at an affordable cost... you have everything under control "the safe way".

You will find us at the Table Top Exhibition (Stand W9) at the CabWire 2011. Find out more about FMS' tension monitoring equipment and ask for a demonstration of the RTM X2 System. We look forward to your visit.
