

The FMS-Configurator

Web Guide Configuration – Straightforward and Smart

The FMS-Configurator is the new software application from FMS designed for personnel involved in specifying or selecting Web Guide products. It is immediately available as a download from the FMS website. This powerful, yet easy to use, application allows you to configure the FMS Web Guide system required for your specific application. This tool guides the user step by step through the analysis of the Web Guide application, determines the geometry of the steering frame, and provides you with a summary of the required system components. For both our current customers and those with new applications, this configuration tool puts speed and accuracy at your fingertips. The FMS-Configurator brings the following Web Guide configuration tools to your screen:

- The graphical user interface provides a thorough review of the application
- Tooltips provide basic information for each parameter or component, thus simplifying the use of the application
- The geometry of your steering frame or actuator is determined automatically based on the application data provided, including type of material, web speed, web width, web correction amount, etc.
- A wide range of Roll Coating options, including Cork, Plasma, Anodizing, Rubber, etc. are available for the steering rolls
- The tool evaluates the data and suggests the appropriate material sensor (ultrasonic, optical, etc.)
- Visual feedback of each component selection is present at all times
- A 3D view of the chosen mounting position eliminates any possible configuration errors
- Delivers a complete bill of material for your Web Guide system
- The final configuration can be saved in a database or in a file, thus allowing for easy sharing with colleagues. Of course it can also be retained as a printed hardcopy.

FMS is a technology leader in Web Tension Measurement, Web Tension Control, and Web Guide Systems. Our products are used worldwide to increase production rates and improve quality on all types of web processing equipment, and we look forward to discussing your application with you.

Download: **FMS-Configurator V1.0 (~7.5 MB) - no cost and no commitments!**
